Subject: q samples

We need to assign one person to make sure that EVERY log that comes into CR-1 is properly sampled. I will not accept what we have been doing....i have put notes on top of certain logs that I wanted tested EVERY time...and the notes have been ignored the majority of the time. Some of the testing has not been taken seriously. This person must make sure that every sample every day gets to Annette. Suggestions? Scott?....does he log them in as they come on a manual written log each day and make sure that the samples are taken before the product leaves CR1.....this will not happen if it's not one persons responsibility + at least one back-up for sick/vaca days.....
